This manual is common for the Black&White and the combined Black&White and Grey Intensity Level versions of the European Font Library.

DanMagic

The European Font Library is part of the IconEdit package

The complete font library is included in the *IconEdit.zip* file in compressed form. The compressed *Name.cbn* or *Name.ief* font files can be unpacked and used by the IconEdit program. The European Font Library cover European and Middle-Eastern Unicode Characters, a library for Chinese, Japanese, and Korean Unicode Characters is available separately.

The C-source code for the complete font library is delivered together with the license number. The C-source code for the complete font library can be delivered by e-mail.

How to view the document

The PDF file viewer should be set to display the document 1:1 - usually called 100% - to avoid distortion of the images.

Content and Library Organization [Click on item to JUMP](#)

The fonts in the font library are organized according to their encoding method, and then subsequently according to what character set they cover. The font files are stored with a directory structure similar to this table of content:

Fonts:

The font library is divided in 2 parts: Classic 8 bit fonts and Unicode 16 bit fonts.

The font library comes in 2 variants: Black&White and Grey Intensity Level.

The Black&White fonts are always present, and in the Grey Intensity Level version of the library an additional set of 2bit grey fonts are interleaved with the B&W fonts.

The grey fonts have names with _g2 in the end, so WE12x16a is a B&W font and WE12x16a_g2 is a corresponding 2bit grey font.

Black & White:

The classic part contains fonts with 8 bit character values:

435 small fonts with each 256 characters for the **ISO8859-1** to **ISO8859-16** font standards with 8 bit character values. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew and Thai in 15 different combinations.

260 small fonts with each 256 characters for the **Windows 1250** to **Windows 1258** font standards with 8 bit character values. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew Vietnam and Thai in 10 different combinations.

The Unicode part contains fonts with 16 bit and 32 bit character values:

11 large normal and 10 large bold proportional sans-serif fonts in **Arial** with each 1045 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

9 small mono-spaced fonts in **Box** with each 310 characters for Unicode 16 bit character values. These fonts cover languages from Western Europe and America plus symbols for drawing boxes on a character display.

10 large light proportional sans-serif fonts in **Light** with each 1043 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

3 small mono-spaced fonts in **Narrow Eu** with each 537 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America.

3 small mono-spaced fonts in **Narrow Ext** with each 635 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese.

15 middle sized mono-spaced fonts in **Small** with each 560 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America.

8 large regular and 8 large bold proportional symbol fonts in **Symbol** with each 1516 characters for Unicode 16 bit and 32 bit character values.

8 large normal and 7 large bold proportional serif fonts in **Times** with each 1045 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

The 435 different ISO8859 fonts from the classic part, but with their characters moved to the character value they have according to the 16 bit Unicode standard. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew and Thai in 15 different combinations.

The 260 different Windows 125x fonts from the classic part, but with their characters moved to the character value they have according to the 16 bit Unicode standard. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew Vietnam and Thai in 10 different combinations.

Finally there are 26 fonts with each 735 characters where all the characters in the ISO8859 and Windows 125x standards are collected in a series of 16 bit Unicode fonts. These fonts cover languages from most of Europe and America plus Arabic Hebrew Vietnam and Thai in one font.

Grey Intensity Level:

The classic part contains fonts with 8 bit character values:

448 small fonts with each 256 characters for the **ISO8859-1** to **ISO8859-16** font standards with 8 bit character values. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew and Thai in 15 different combinations.

280 small fonts with each 256 characters for the **Windows 1250** to **Windows 1258** font standards with 8 bit character values. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew Vietnam and Thai in 10 different combinations.

The Unicode part contains fonts with 16 bit character values:

11 large normal and 11 bold proportional sans-serif fonts in **Arial** with each 1045 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

12 large normal and 12 bold proportional sans-serif fonts in **Bahn** with each 506 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America.

18 large light proportional sans-serif fonts in **Light** with each 1043 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

9 proportional sans-serif fonts in **Roboto** with each 1045 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

8 large regular and 8 large bold proportional symbol fonts in **Symbol** with each 1516 characters for Unicode 16 bit and 32 bit character values.

8 large normal, 8 bold, 8 narrow normal, and 8 narrow bold proportional serif fonts in **Times** with each 1045 characters for Unicode 16 bit character values. These fonts cover languages from most of Europe and America plus Vietnamese Hebrew and several Arabic including presentation forms. To use Hebrew and Arabic you will need the IconEdit text converter or a similar tool.

The 448 different ISO8859 fonts from the classic part, but with their characters moved to the character value they have according to the 16 bit Unicode standard. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew and Thai in 15 different combinations.

The 280 different Windows 125x fonts from the classic part, but with their characters moved to the character value they have according to the 16 bit Unicode standard. These fonts cover languages from various parts of Europe and America plus Arabic Hebrew Vietnam and Thai in 10 different combinations.

Finally there are 28 fonts with each 735 characters where all the characters in the ISO8859-1 to -16 standards are collected in a series of 16 bit Unicode fonts. These fonts cover languages from most of Europe and America plus Arabic Hebrew Vietnam and Thai in one font.

Common for Black&White and Grey Intensity Level:

Most of the fonts related to the classic 8 bit font standards also have a group of arrows in the range 0x10-0x1F meant for navigation in menus. These are not according to neither the ISO8859 nor the Windows standard, but placed in an area with un-displayable and mostly obsolete control characters. Each particular arrow always has the same character value regardless of the encoding of the font.

The fonts can be used directly together with the RAMTEX LCD driver libraries. The B&W fonts can be used with both black-and-white, grey-scale, and color displays, the Grey fonts can only be used with grey-scale, and color displays.

The Unicode fonts are to be considered as master fonts, and can be reduced or edited if necessary with the editor and design tool IconEdit.

IconEdit is available from RAMTEX, and both the black & white version and the color version of IconEdit can be used.

The fonts are delivered as C source code as an array of structures and can therefore be read with a normal text editor and included directly in 'C' code.

For more information please visit the RAMTEX homepage <https://www.ramtex.dk>

Font size is a representative screen-dump of small parts of each font. This screen-dump has no direct relation to the code page character list for the font. The whole code page character list is shown for one of the fonts in the group after the list of the fonts.

These are typical lines in a complete code page character list screen-dump:

The number above the symbol is the character value in hexadecimal form.

Classic 8 Bit fonts without code page character lists

The Classic 8 bit fonts always contain 256 characters, and therefore does not need or use the code page character list system.

There exist a very large number of different 8 bit font standards with conflicting names and conflicting arrangement of the characters, but usually they all contain the 96 ASCII characters in the range from 0x20 to 0x7F. ASCII (American Standard Code for Information Interchange) is a 7 bit standard from the early sixties. It defines the numbers, letters and symbols used in American English plus no less than 32 control codes used for Teletype machines, these codes are now mostly obsolete and often used for other purposes. Most programming languages only use the ASCII characters.

The ISO8859 8-bit standard defines 96 basic ASCII characters in the range 0x20 to 0x7F and up to 96 specific characters in the range 0xA0 to 0xFF, the rest are non-displayable control characters, or used for special graphic symbols. The 32 characters from 0-0x1F often take up unnecessary ROM space and can be removed by using the code page character list system in IconEdit.

Advantages of 8 bit fonts over 16 bit fonts:

Characters have 8 bit values, plain C *char* strings can be used, and texts takes up as little room as possible.

A font contains only contains characters for a few national languages and therefore takes up less ROM.

Fonts using 16 Bit Unicode code point character lists

The fonts in this section contain Latin, Greek, Cyrillic, Arabic and Hebrew Unicode characters for use in the American, European and Middle Eastern countries.

Most of the fonts also have a group of arrows in the range 0x10-0x1F these are not according to the Unicode standard.

Advantages of 16 bit fonts over 8 bit fonts:

Easy to change or add a language.

Only one ROM version for the whole EU is necessary.

The fonts in this library contain characters for languages that may not ever be needed by the equipment, but unused characters can easily be removed with the IconEdit tool.

There are over 50000 characters defined in the Unicode 16bit system, and these covers just about all living languages in the whole world. This means that ROM versions for other parts of the world do not need significant code changes, just other texts and an extension of the fonts.

Numbers

These are mixed mono-space and proportional fonts. The “N” fonts have mono-space numbers while the other characters are proportional. The “N” is followed by an approximate height as in “N64”. The numbers with round top or bottom are usually slightly larger than those with flat top or bottom. The look is designated by 2 or 3 letters as in “_anr”.

IsoToUni - Small Area Fonts - - Latin Greek Cyrillic Hebrew Arabic Thai

The fonts contain Unicode versions of the up to 192 characters defined in each ISO 8859 version for use in different countries or areas, plus one where all the characters defined in all the 15 ISO 8859 versions are collected as one Unicode font.

These fonts all contain a basic set of Latin characters plus the characters defined for a particular language or area. The “All” fonts covers the languages used in Europe and America plus Hebrew, Arabic and Thai.

Some fonts are mono-space **M** others are proportional **P**.

I-0-All Latin Greek Cyrillic Hebrew Arabic Vietnamese Thai.

ISO8859_8Bit Classic Fonts Directory:

ISO 8859 - Small Area Fonts - - Latin Greek Cyrillic Hebrew Arabic Thai

- The fonts contain 256 characters for use in different countries or areas. The ISO 8859 standard covers the languages used in Europe and America plus Hebrew, Arabic and Thai.
- These fonts all contain a basic set of Latin characters (= ASCII characters) plus the characters defined for a particular language or area.
- Some fonts are mono-space **M** others are proportional **P**.
- The character ranges 0x00-0x1F and 0x80-0x9F are not defined in the ISO8859 standard, and may contain arbitrary symbols.
- Most of the fonts have a group of arrows in the range 0x10-0x1F, please note that these are not part of the ISO8859 standard.

Warning: *ISO 8859 fonts are not identical to Windows 8 bit fonts with the same name.*

Font file formats

This appendix describes the C source code format used by IconEdit tool and by the RAMTEX display driver library for black & white two color characters and grey intensity level characters with smoothing.

Black & white two color characters with zoom factor 2:

Grey intensity level characters with smoothing with zoom factor 2:

A source font consist of 2 or 3 ‘C’ files with a common name but different extension.

Name.c is a framework for the other 1 or 2 files. It does not contain any data, but defines structures and includes for the other files with the actual data. This is the only file that needs to be included in a ‘C’ program to use the data. This file can only be used in connection with the include files below.

Name.sym is always present. It contains the pixel data for all the symbols or characters in the data set. The pixel data can be either colors or indexes into a palette containing the colors. It has a private comment header on the first lines for use by the IconEdit tool with information such as size of symbols, color depth and any associated files.

Name.cp is only present for fonts using a code page character list. It is a list of character values ranges for the symbols in the .sym file. It has a private comment header in the first line for use by the IconEdit program with information such as the number of characters.

Using the IconEdit tool

All fonts in the European font library have been created with the IconEdit tool. The IconEdit tool can be downloaded from www.ramtex.dk/iconedit/iconedit.htm.

IconEdit runs in demo mode until a valid license is entered. In demo mode IconEdit can be used for viewing symbols and fonts. Existing fonts can be edited, and new fonts can be created, but without a valid license the design work can only be saved in an IconEdit Project file for later use. No ‘C’ source codes are generated without a valid license.

After entering the valid license in IconEdit new or changed symbols and fonts can be saved as 1, 2 or 3 ‘C’ source files as described above. So can font files previously saved in an IconEdit Project file.

IconEdit Font header comment

The IconEdit tool inserts a 'C' comment in the beginning of each font .sym and .cp file. This comment is for internal IconEdit use only. It is recommended that the font header comment should not be deleted or modified.

The comment header fields describe the content of the font or code page character list file and specific for the IconEdit tool. The headers and field description shown in the following chapters are for information only.

Source code formats for Black & White files

Symbol data files for black and white symbols without code page character list that like this:

And will have this sym file:

```
/*Y 8 8 8 32 . AB_8x8[2]={

The additional code page character list data file looks like this:

```

/*W AB_8x8_Cp.cp IconEdit FileDescriptor: Do not edit or move */
{2,0x0020},{ /* First number is number of ranges, last number is default Character */
{0x0020,0x0020,0x0000}, /* Segment 0 0x0001 Symbols */
{0x0041,0x0042,0x0001}} /* Segment 1 0x0002 Symbols */
```

The only difference between a group and a font data file is the code page character list field CP<> and the numbering of each symbol.

Description of the header comment in IconEdit B&W .sym files:

File AB_8x8_Cp IconEdit FileDescriptor: Do not edit or move */
```

- /*Y is the file type identifier for B&W.
- 8 indicate that there are 8 bits per byte in the data field. This is for backward compatibility to older programs.
- 8 is the maximum X size of a character or symbol. Here 8 pixels.
- 8 is the maximum Y size of a character or symbol. Here 8 pixels.
- 32 is the number of elements per row in the display. This is for backward compatibility to older programs.
- CP<AB_8x8_Cp.cp> is the marker for the associated Code page character list file name. This defines the data as characters.
- . is an internal declaration terminator.
- [2] or [3] is the number of elements in the font or group.
- { is the end indicator for public editor data.
- ; is the start indicator for private editor data, this data may vary according to editor version.

- `*/` is the start indicator for pixel data.

Sym data fields:

```
/* Sym 0x0001 - Char 0x0041 Do not edit or move */
```

This is symbol number and character values.

```
{8,8}
```

This is the X,Y size of the symbol.

```
0x18, /* ...**... */
0x3C, /* ..*****.. */
0x66, /* **...**.. */
0x66, /* **...**.. */
0x7E, /* *****.. */
0x66, /* **...**.. */
0x66, /* **...**.. */
0x00  /* ..... */
```

This is the pixel data of the symbol. The bits are packed one by one in a byte with 8 pixels, the left pixel in the most significant bits in the byte. The bytes follow each other horizontally until a whole row of pixels in a symbol is defined.

```

- /*V is the file type identifier for Grey or Color.
- F indicates that this is a font.
- 3 is the number of characters or symbols.
- 32 is the number of elements per row in the display. This is for backward compatibility to older programs.
- 8 is the maximum X size of a character or symbol. Here 8 pixels.
- 8 is the maximum Y size of a character or symbol. Here 8 pixels.
- CP<AB_8x8_Cp_g2.cp> is the marker for the associated Code page character list file name. This defines the data as characters.
- R indicates that this is RGB type pixel data, a Q would indicate palette based data.
- G indicates that this is grey data, a C would indicate full color data.
- 4 is the header version number.
- 4 is the size of the working palette.
- 8 8 8 is the R G B resolution in bits for full color data, not used for grey data.
- 2 is the grey resolution in bits, not used for color data.
- 00555555 is the tool color in 32 bit hex, this would be dark grey.
- 00FFFFFF is the background color in 32 bit hex, this would be white.
- 0 is the rendering indicator, 0 is off.
- 00FF2D06 is the rendering color in 32 bit hex, this would be bright blue.
- ; is the start indicator for private data, this data may vary according to editor version.
- */ is the start indicator for pixel data.

Sym data fields:

```
/* Sym 0x0001 - Char 0x0041 Do not edit or move */
```

This is symbol number and character values,

```
{0,0x42,8,8}
```

The first 0 is to indicate that data is not B&W, then 0x40 + the number of bits per pixel for grey intensity level, and finally the X,Y size of the symbol.

```
0xFD, 0x7F,
0xF0, 0x0F,
0xD3, 0xC7,
0xC3, 0xC3,
0xC0, 0x03,
0xC3, 0xC3,
0xC3, 0xC3,
0xFF, 0xFF
```

This is the pixel data of the symbol. The bits are packed two by two in a byte with 4 pixels, the left pixel in the most significant bits in the byte. The bytes follow each other horizontally until a whole row of pixels in a symbol is defined.

Source code formats for code page character list files

Symbol data files for characters with code page character list that look like this:

will have this cp file:

```
/*W AB_8x8_Cp.cp IconEdit FileDescriptor: Do not edit or move */
{2,0x0020},{ /* First number is number of ranges, last number is default Character */
{0x0020,0x0020,0x0000}, /* Segment 0 0x0001 Symbols */
{0x0041,0x0042,0x0001}} /* Segment 1 0x0002 Symbols */
```

Description of header comment in IconEdit .cp files:

- In the Code page character list data file the characters /*W indicate that it is a Code page file.

Code page character list .cp data fields:

{2, is the number of ranges == segments. This is also the number of segment data lines after this line.

0x0020} is the default character. In this case SPACE. This should be used if a character is not defined in the font.

{0x0020 is SPACE, the first character in the range

,0x0020 is SPACE, the last character in the range

,0x0000} is the offset of first character in the range in the font data

{0x0041 is A, the first character in the range

,0x0042 is B. the last character in the range

,0x0001} is the offset of first character in the range in the font data
